A common source of errors are:

1. Enclosing symbols which, usually, are automatically closed (do you like it?)

2. Or command auto-completion (not that bad).

3. Or missing stuff
   hola

4. Or silly typos itemize

5. Something

A good approach to solve an error?

- First, where is the error? (Options, configure tex-studio, editor, show line numbers).

- Then, comment out that line! Be patient.

- Still not working? Google is your best friend.

A good workflow to not have lots of errors?

- Type,

- compile,

- visualize the output.
